FOR IMMEDIATE RELEASE

Curb Roller Manufacturing Offers Custom Drums for Challenging Pours at PWX 2022

CHARLOTTE, N.C., (Aug. 24, 2022) – [Curb Roller Manufacturing](http://CurbRollerManufacturing.com), the world leader in shaped concrete roller screeds, makes challenging concrete pours achievable with specially designed [custom drums](#). Leveraging the experience and success the company encountered with the launch of the curbing machine and custom drum shapes, Curb Roller ventured into a new area where their shaped concrete expertise could improve efficiency, reduce labor and boost productivity. The custom solutions pair with the Curb Roller’s [Hydra-Screed 3000](#) to allow for faster production times and a superior-quality finish on projects that would normally require multiple pours.

Curb Roller Manufacturing will highlight their custom drums, along with other products and technologies, at **booth 5057** in the Charlotte Convention Center at the [Public Works Expo \(PWX\) Show](#), August 28-31, in Charlotte, North Carolina.

“Having worked as a concrete contractor for a number of years, I have firsthand knowledge of the complexity that accompanies pouring a concrete spillway or flume,” said Seth Ulmer, Curb Roller Manufacturing sales manager. “At Curb Roller, we strive to make the impossible not only possible but profitable as well. Our custom drum designs enable contractors to complete a challenging pour without having to break it into multiple parts. It’s an ideal solution to accelerate productivity and minimize labor.”

The custom rollers are ideally suited for unique shape requirements or large pours on jobs like drainage systems or spillways. The team at Curb Roller designs the drum to exact specifications, working with the project engineers to make sure the drum meets all project requirements. The drums are built to spec and are usually created in a month or less depending on shape and size.

“A Curb Roller custom drum reduces labor requirements and time on projects, while also creating an increase in overall profitability on those challenging jobs,” said Ulmer. “The drums are used on anything from street work, medians and v-gutters to flume and other specialty applications. The single pour approach eliminates the need for construction joints, doweling and pinning, and reduces the need for additional forming.”

Operators pair the custom drum with the Hydra-Screed 3000, Curb Roller's two-operator hydraulically powered screed system that allows for continuous pours in applications like flatwork, flumes and more. The Hydra-Screed achieves job completion in half the time of alternative hand shaping methods.

Curb Roller's custom drum solutions can be applied to applications as wide as 26 feet and as deep as 4 feet and can be created in a variety of shapes to meet job specifications. The custom solutions have been used on projects by concrete and DOT crews across the globe.

About Curb Roller Manufacturing

Curb Roller Manufacturing has been the world leader in shaped concrete roller screeds for more than 10 years. With high-quality products for everyday concrete work, Curb Roller's ergonomic machines not only make it easy to shape standard curb, gutter, and sidewalks, but also flume, v-gutter, swale, and other unique shapes. Their flagship product, the award-winning CM4000 Curb Roller, opened the door for additional products like the Hydra-Screed and the battery-powered Batt Screed and corded Eel Screed.
